Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/939,624

Applicant(s)

ROBERTS, ROBIN U.

Examiner

Matthew W. Genack

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 March 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 39-62 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 39-62 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 39-41, 43-47, 52-55, and 57-59 are rejected under 35 U.S.C. 102(e) as being anticipated by Orava, U.S. Patent Application Publication 2002/0071477.

Regarding Claims 39 and 52, Orava discloses a wireless device, a plurality of which are used in an ad hoc network, the plurality of wireless devices acting as nodes connected to each other (Abstract, [0016], [0020], Figs. 1-3). Each wireless device may operate in one of several states, including a standby state and a connection state, whereby in order to establish a connection route, a wireless device discovers other wireless devices in its area that are available ([0043]-[0049], Fig. 6).

Regarding Claims 40-41, 45 and 54-55, when a wireless device is attempting to make a connection, it is in an inquiry substate, and it receives user information and network information in the form of Bluetooth device addresses and clock information of

Art Unit: 2645

all wireless devices that respond to the inquiry; the master determines which wireless devices are in the default standby state, and therefore, available as slaves ([0044]-[0045], [0047]).

Regarding Claims 43-44, 53, and 57, the wireless devices are informed of changes in the states of neighboring wireless devices in that the signals exchanged between said wireless devices are indicative of the current states of the wireless devices: standby state (the default), connection state, and the page, page scan, inquiry and inquiry scan, master response, slave response and inquiry response substates ([0043]-[049]).

Regarding Claims 46-47 and 58-59, wireless devices in the standby state are not communicating with other wireless devices of the ad hoc network ([0049]), and when a wireless device initiates a connection with a neighboring wireless device, the former becomes a master in the connection state, and the latter becomes a slave in the connection state, both devices formerly operating in the standby state ([0043], Fig. 6).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 42 and 56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Susnow *et. al.*, U.S. Patent Application Publication 2002/0159385.

Orava does not expressly disclose the reception, by a wireless device node, of credits for the relaying of packets.

Susnow *et. al.* discloses the use of flow control credits in the transmission of data packets in a wireless network, and the comparison of the current number of accumulated credits with a credit threshold, in the context of data sent from a source node to a destination node by way of intermediate nodes in a wireless network ([0017], [0037], [0071]).

At the time that the invention was made, it would have been obvious to one of ordinary skill in the art to modify the invention of Orava by providing for the reception, by a wireless device node, of credits for the relaying of packets, and the comparison of the current number of credits of that node with a maximum number of credits allocated for that node.

One of ordinary skill in the art would have been motivated to make this modification so as to prevent any one node from being inundated with an excessive number of packets to be relayed (Susnow *et. al.*: [0071]).

6. Claims 48-50 and 60-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Orava in view of Larsen *et. al.*, U.S. Patent No. 6,810,428.

Orava teaches the use of line powered communication wireless communication devices with the system of the invention ([0011]-[0012]).

Orava does not expressly disclose the grouping of wireless device nodes by class, a class being selected from the group of classes comprising nodes connected to

line power, nodes with a high remaining battery life, nodes with the least interference, nodes with the least available energy, and high performance nodes.

Larsen *et. al.* discloses a wireless communications network comprised of multiple mobile terminals, along with a method of operating such a network (Abstract, Column 1 Lines 30-35, Fig. 1). The user terminals comprise transceivers that are able to transmit wireless communications data to destination user terminals or receive wireless communications data from destination user terminals by way of intermediate user terminals in the same network (Column 4 Lines 34-37 and 51-63, Column 5 Lines 4-9, Fig. 1). The user terminals comprise controllers that are able to allow or prevent the transmission of said wireless communications data based on routing data related to the powers required for transmission, powers available for transmission, connection quality, and the potential levels of interference between neighboring user terminals (Abstract, Column 1 Lines 40-45 and 64-66, Column 2 Lines 15-38, Column 4 Line 65 to Column 5 Line 3, Column 16 Lines 53-61, Column 25 Lines 26-35).

At the time that the invention was made, it would have been obvious to one of ordinary skill in the art to modify the invention of Orava by grouping nodes by class, a class being selected from the group of classes comprising nodes connected to line power, nodes with a high remaining battery life, nodes with the least interference, nodes with the least available energy, and high performance nodes, whereby an immediate neighbor node is set to either the connection state or the standby state when a node belongs to one of these classes.

One of ordinary skill in the art would have been motivated to make this modification because required power levels, available power, and interference are common concerns in wireless networks, especially ad hoc wireless networks, which involve low power devices and data being sent via several links.

7. Claim 51 is rejected under 35 U.S.C. 103(a) as being unpatentable over Orava in view of Stanforth, U.S. Patent Application Publication 2003/0045295.

Orava does not expressly disclose the storage of neighbor tables in the wireless devices of the invention.

Stanforth discloses an ad-hoc, peer-to-peer radio access system (Abstract, [0012]). Neighboring terminals routinely exchange routing tables with each other, each routing table containing details of the state of each neighboring terminal of the terminal containing the routing table ([0037], Fig. 3).

At the time that the invention was made, it would have been obvious to one of ordinary skill in the art to modify the invention of Orava by providing for the exchange of routing tables, each routing table containing details of the state of each neighboring terminal of the terminal containing the routing table, among the wireless devices of the ad hoc network.

One of ordinary skill in the art would have been motivated to make this modification because of changing conditions such as battery level (Stanforth: [0010]-[0011]).

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew W. Genack whose telephone number is 571-272-7541. The examiner can normally be reached on FLEX.

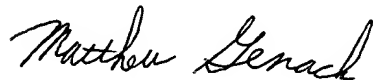

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duc Nguyen can be reached on 571-272-7503. The fax phone number for the organization where this application or proceeding is assigned is 571-273-7541.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
